MORE THAN A DISTRIBUTOR

Experience the next generation of inventory management with VENDING MACHINES

Product available 24/7

Reduction of product usage by up to 35%

No stock-outs and out-of-stock costs

VENDING MACHINES are a key part of our innovative solution that helps you manage your inventory professionally, meeting your goals for availability, cash-flow, and reporting in today's challenging business world. Our vending machines allow you to reduce costs in your supply chain, reduce maintenance downtime by improving product availability, and generate reporting by product, employee, or cost center. Vending machines provide numerous standardization and consolidation opportunities all while maintaining high transparency and traceability.

Let Würth's vending machine solutions do the work for you!

QUALITY ASSURANCE

ISO Quality Certified
A2LA Accredited

Our global infrastructure of ISO-accredited testing labs ensures quality, and the product expertise of our Quality and Engineering personnel is unmatched.

SIMPLIFY WITH CPS®

GLOBAL SOURCING

Supplier Development, Part Inspection And Laboratory Testing

Würth has created its' own world-wide engineering program to audit and qualify new sources for existing and new products. Product imported into the United States directly is inspected before it leaves port. With our global reach we can source any part needed by any customer.

Würth has the largest Supplier Quality Engineer (SQE) network in the fastener industry ready to audit, qualify and develop suppliers in any location around the world. Whether our supplier is located in Cleveland, Guangzhou, Delhi, Frankfurt or any other location, we have a SQE located nearby. Our SQE's prevent both our customers and Würth from experiencing quality related issues.

Ethical negotiations form the foundation of Würth's relationships with our suppliers. We recognize that our word is vitally important in building long-standing, mutually beneficial relationships. We strive in all of our correspondence to communicate clearly the short-term requirement along with the long-term opportunity to our suppliers—transparency is paramount.

We leverage our global purchasing volumes to assure we are providing the most competitive total cost basis to our customers.

C-PARTS are small assembly components with secondary significance to the finished product.

- Typically make up 5% of total spend but account for 80% of part numbers.

CPS® is an innovative modular system of **C-Parts Solutions**, easily customizable to your needs.

CPS® ADVANTAGES

- Innovative, Modular Inventory Management System
- Total Transparency of Program Information
- Proactive Inventory Management
- Value Engineering Support
- Supplier Reduction
- Parts Consolidation
- Total Cost Savings

MAXIMIZED BENEFITS

With Würth as your primary supplier, your savings increase with every part number added to our innovative and proactive CPS® program.

We offer several program options that can be tailored to your requirements.

Würth Industry of Canada Ltd. (WIC)

A division of the Würth Group, one of the world's largest distributors of assembly components, allowing us to provide customers with superior service. Contact your Würth representative today to learn more about what real peace of mind means as it relates to your C-Parts needs.
